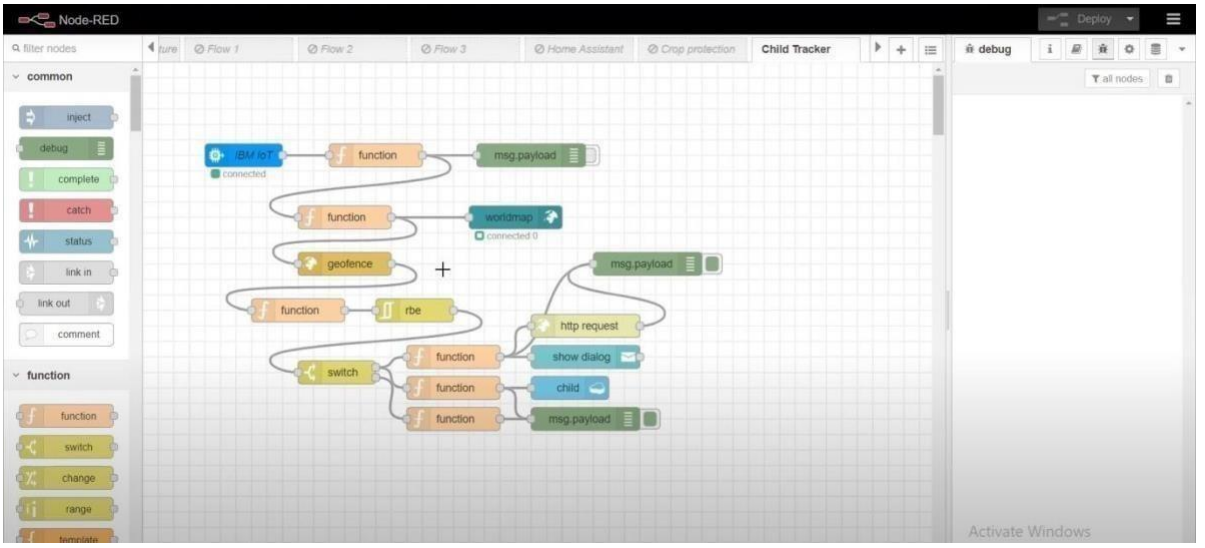
Develop A Web Application Using Node-RED

Name	KARTHI
Team I'd	PNT2022TMID16715
ProjectName	Project- IoT Based Safety Gadget For Child Safety Monitoring& Notification
Maximum Marks	2 Marks

Steps Followed:

- Opened a Node-RED project



- Added code to get child location in python

- the

```
import json
import wiotp.sdk.device
import time

myConfig = {
    "identity": {
        "orgId": "hj5fmy",
        "typeId": "NodeMCU",
        "deviceId": "12345"
    },
    "auth": {
        "token": "12345678"
    }
}
client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()

while True:
        name= "Smartbridge"
        #in area location

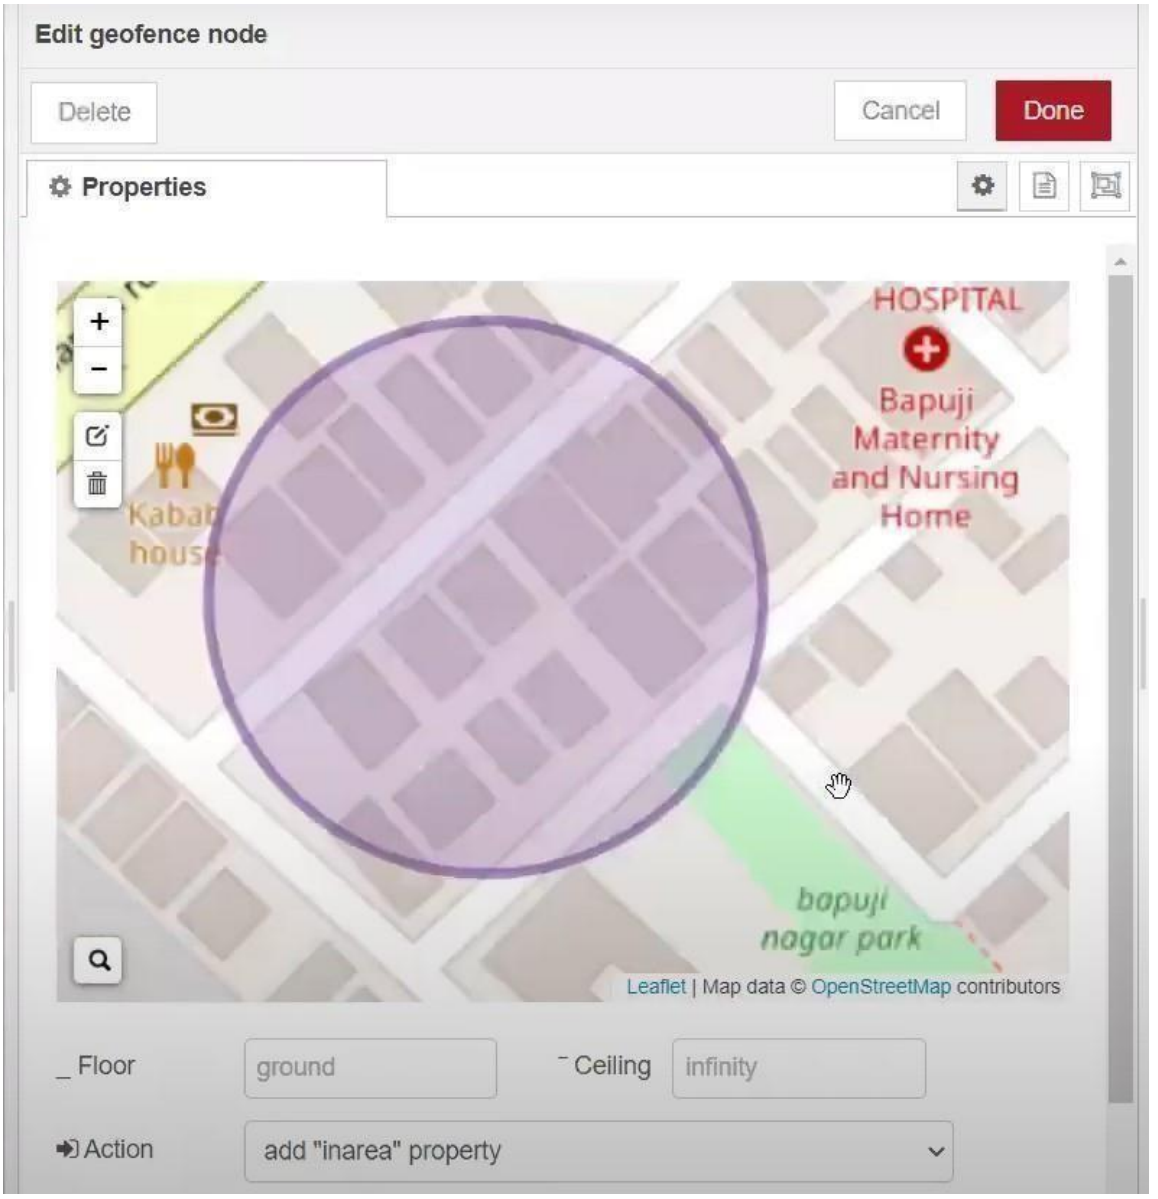
        latitude= 17.4225176
        longitude= 78.5458842

        #out area location

        #latitude= 17.4219272
        #longitude= 78.5488783
        myData={'name': name, 'lat':latitude,'lon':longitude}
        client.publishEvent(eventId="status", msgFormat="json", data=myData, qos=0, onPublish=None)
        print("Data published to IBM IoT platfrom: ",myData)
        time.sleep(5)

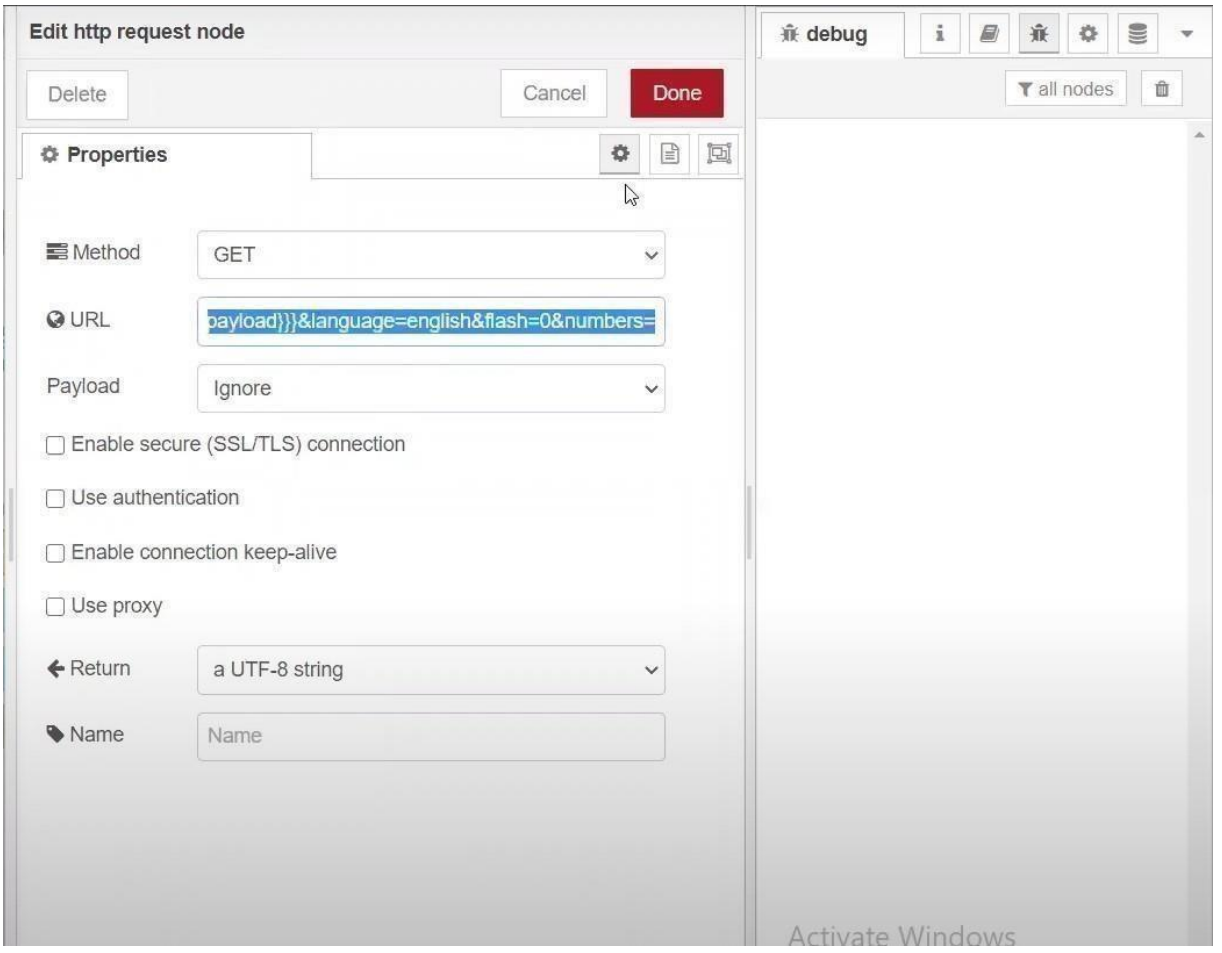
client.disconnect()
```

Created Geo Fence

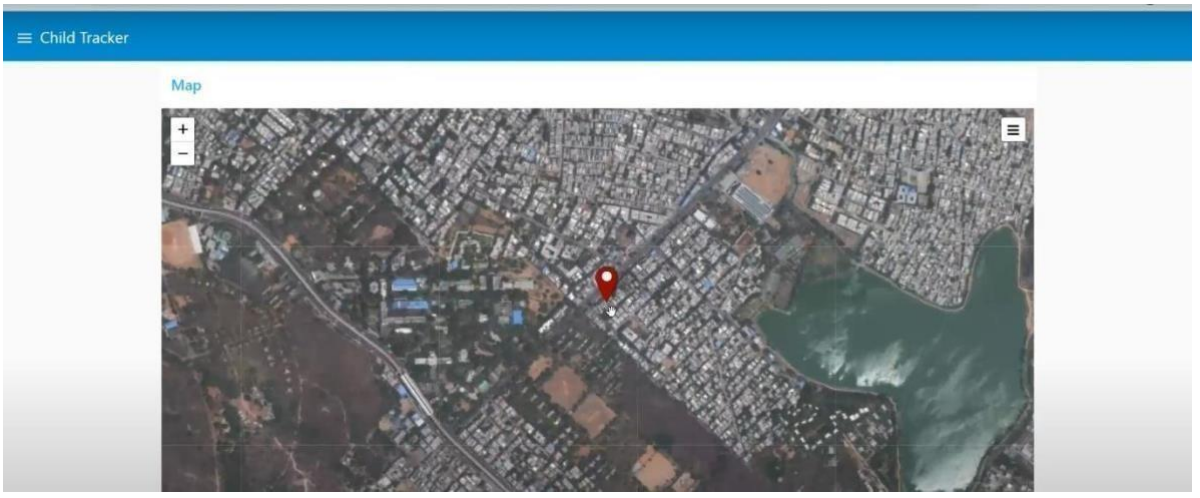


- the

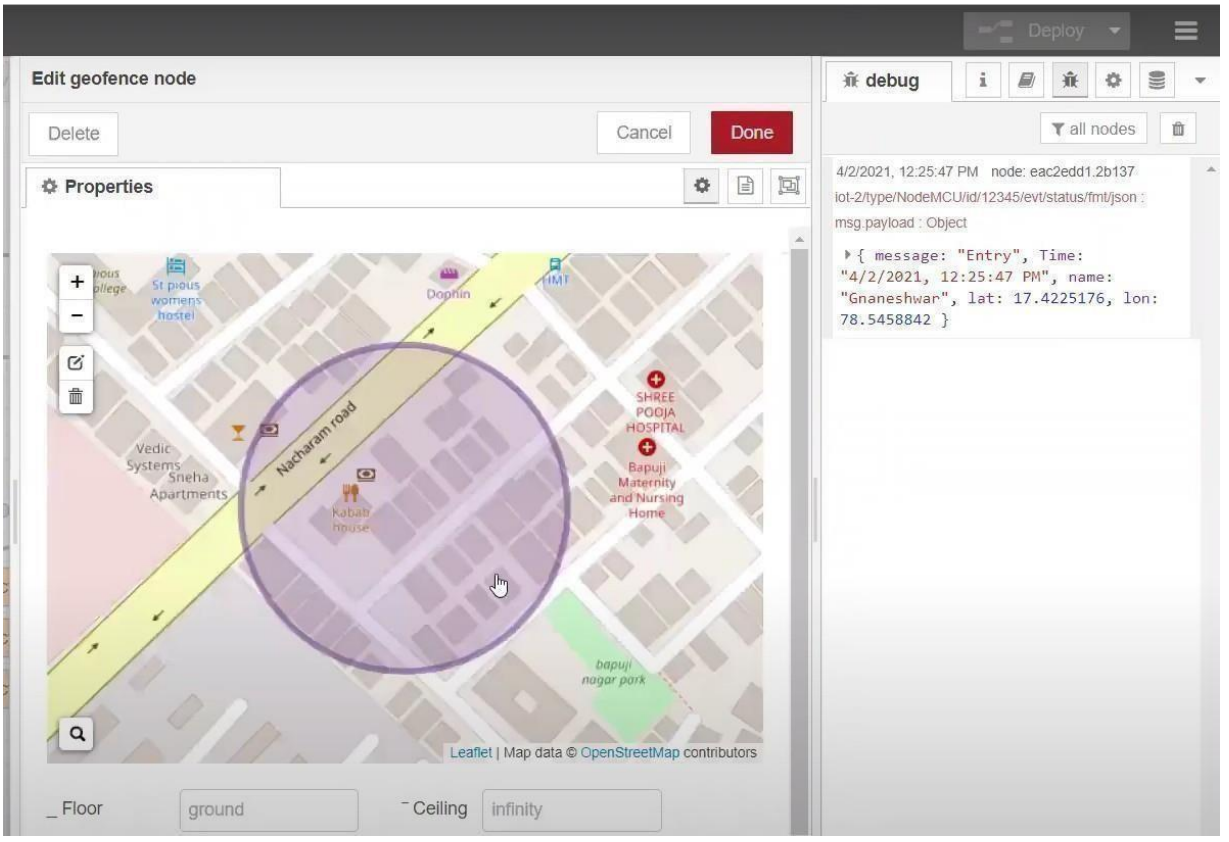
Editing HTTP Request URL



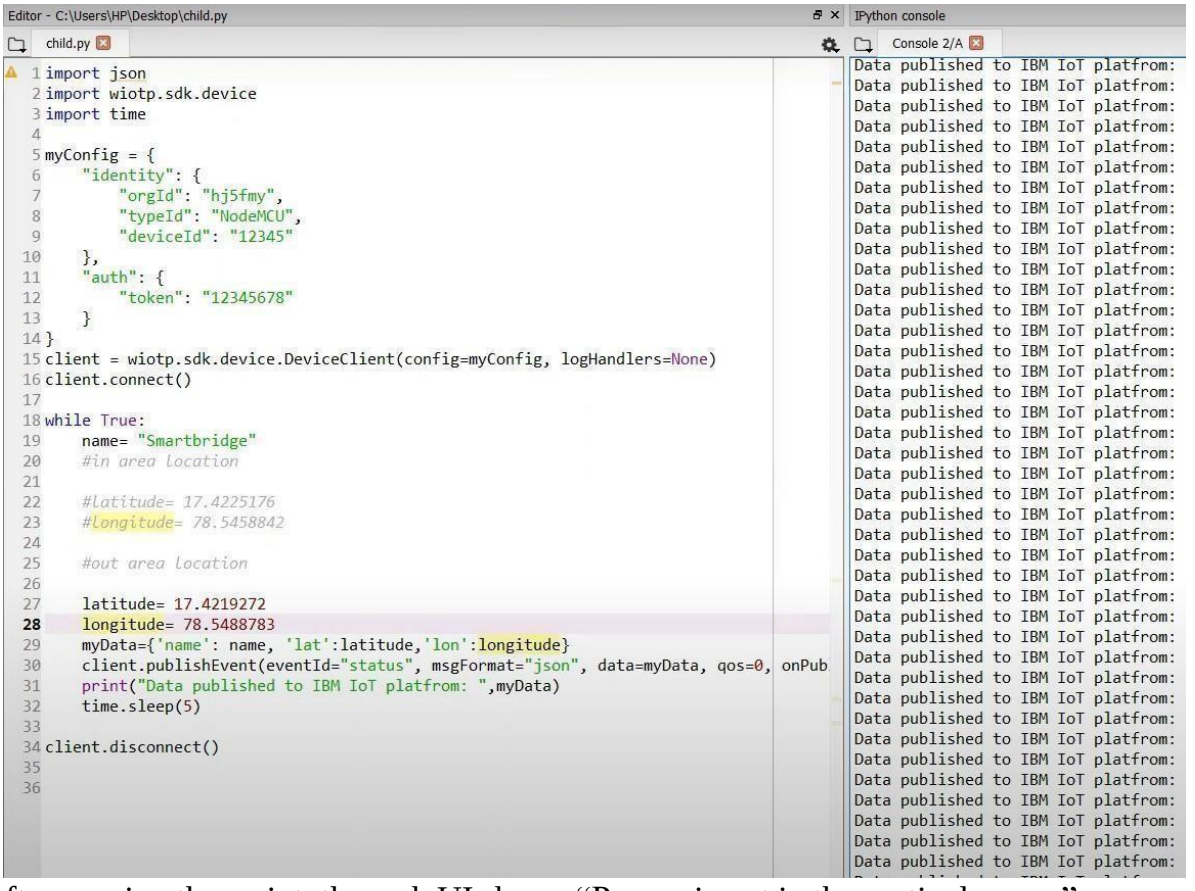
- Located the child



Created geo fence node



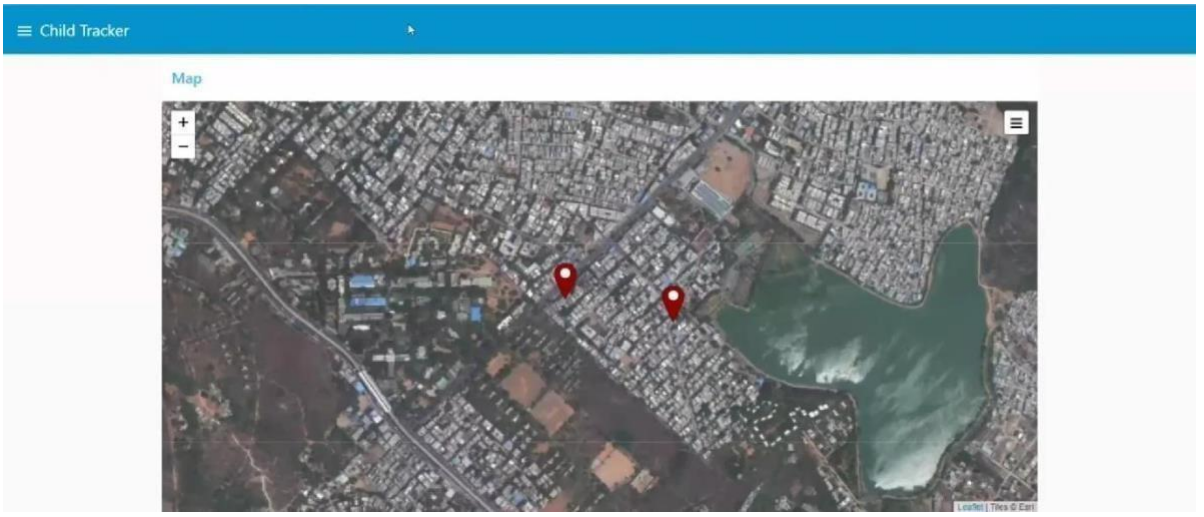
- Python script sending requests to IBMCloud



After running the script, the web UI shows “Person is not in the particular area”

- the

-



Result:

Successfully developed a web application using Node-RED.
